

THE GATE CLOSER SPECIALISTS

Verticlose Pedestrian Gate Closer

Verticlose is the big brother to the Lion pedestrian gate closer and has the same features as the Lion.

Designed for installation with both in-line (90° opening) and offset hinged (180° opening) gates, you have one closer which provides automatic hydraulically controlled gate closing for wider and heavier pedestrian gates.

With easy to understand working parameters, you can confidently specify Verticlose simply based upon post and gate detail.

Verticlose is at home in many places. Verticlose is a smart choice when you are specifying pedestrian gate closers for security fencing, working with access control systems, schools, apartments, car parks, marinas and most pedestrian entrance points.

Continuous production batch testing to 500,000 cycles ensures you have the most reliable product possible and minimises call-backs where time and money are lost. Add to this the use of corrosion resistant powder coated aluminium body parts and stainless steel arms rails and accessories, your customer will have little reason to question your choice to install a Verticlose pedestrian gate closer.

Like all Locinox products, Verticlose has been designed to give you easy and quick installation. Each closer includes two rails so you can install the closer to both in-line or offset hinged gates. With self-adhesive templates to show you where each hole is to be drilled, installation is simple.

If you would like help with anything to do with this product, our telephone number and email address are at the bottom of this page.

LOCINOX

Key features:

90° opening with in-line hinges

180° opening with offset hinges

Gates up to 1.5 m wide x 1.8 m high x 150 kg

Fully functional down to -30° C

60 mm box section or larger posts

30 mm box section or larger gate frames

Installs left or right opening

Separate closing & latching speed adjustments

Production testing for 500,000 cycles

Easy install with Quick-Fix threaded inserts

Wall Mounting

The two earlier pages have shown how you can install a Verticlose with the two common hinge arrangements, in-line and offset. There is another arrangement which is to mount to a wall or block work.

Mounting a Verticlose to a wall means you can provide your customer with automatic closing of a pedestrian gate in situations such as between brick piers and also give your customer a full 90° gate opening angle.
