

Q Bolt

Drop Bolt (lockable with padlock)

The Q-Bolt is a stylish and affordable drop bolt solution, providing higher quality options than current mild steel or stainless steel drop bolts.

Q-Bolt is key-lockable and available in two lengths: 24" and 40" (610mm and 1016mm).

The Q-Bolt is made from high-grade stainless steel that has gone through an electro-polishing process to add to its rust-resistance. It is then powder coated black to further protect it from corrosion.

Because locking certain security is only required in certain situations or applications, an optional 'padlockable' feature has been built into the Q-Bolt.

For convenience, the Q-Bolt also offers a lock storage facility for when the padlock is not being used. A bolt retention feature prevents the rod from dropping and dragging across the drive ways and also keeps the rod from being pulled out of the brackets when mounted to a gate.

There are models with mounting brackets for metal gates and models with wider brackets for wood and vinyl gates. All models include alignment legs for ease of installation and added fixing strength.

INNOVATIVE & RELIABLE
GATE PRODUCTS

THE GATE CLOSER SPECIALISTS

Technical Overview:

Padlockable security (padlock not included)

For metal, wood or vinyl gates

High wear and corrosion resistance

Economical, stylish and high tech

Two different bolt lengths (610 or 1016mm)

Black finish

Polished and powder coated

Fits left and right hand gates

Convenient and safe

Specific mounting brackets for specific gates

Lock storage facility
